Application No.: 09/090,406

a plurality of raised portions extending substantially perpendicularly between adjacent barriers [along its/length]; and

a plurality of discharge spaces, each space being formed between the first substrate and the second substrate and being defined by two adjacent barriers and two adjacent raised portions [the barrier layer and the second substrate, and being at least partially defined by at least two adjacent raised portions of the barrier layer].

- 2. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 1, wherein the <u>plurality of barriers and raised portions comprise a barrier layer</u>, <u>and</u> the barrier layer includes a flourescent layer.
- 3. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 1, [where] <u>wherein</u> the <u>plurality of barriers and raised portions</u> [barrier layer is] <u>are</u> shaped to prevent discharge between adjacent discharge spaces.
- 4. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 2, wherein a portion of the flourescent layer is flat.
- 5. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 2, wherein [the] <u>a</u> portion of the flourescent layer corresponding to each discharge space has a hemispherical shape.

Application No.: 09/090,406

6. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 2, wherein [the] <u>a</u> portion of the flourescent layer corresponding to each discharge space has a semi-elliptical shape.

B1 Cond 7. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 2, wherein [the] <u>a</u> discharge space defined by the flourescent layer has a plasma formation shape.

8. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 1, wherein <u>the discharge spaces</u> [barrier layer is] <u>are each</u> formed in a plasma formation shape.

- 9. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 1, wherein the <u>plurality of barriers and raised portions comprise a barrier layer</u>, and a height of the barrier layer decreases from a boundary between two discharge spaces to the centers of said spaces.
- 10. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 1, wherein the discharge spaces are spherical.
- 11. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 7, wherein the plasma formation shape is spherical.

12

Application No.: 09/090,406

and on B

12. (Twice Amended) A [discharge space structure of a] plasma display panel, comprising:

a substrate:

a [pair] plurality of parallel linear barriers formed on the substrate; and

a plurality of discharge spaces formed between the parallel linear barriers, each discharge space being formed between a pair of adjacent barriers and between a pair of raised portions extending substantially perpendicularly between the pair of adjacent barriers [each barrier having a plurality of raised portions along its length, said raised portion defining a boundary between two adjacent discharge spaces].

13. (Amended) The [discharge space structure] <u>plasma display panel</u> as claimed in claim 12, further comprising:

a flourescent layer formed on each barrier, and having a plurality of <u>flourescent</u> <u>layer</u> raised portions corresponding to the raised [barrier] portions, each flourescent layer raised portion defining a boundary between adjacent discharge spaces between the barriers.

14. (Amended) A method of making a barrier layer of a plasma display device, comprising:

coating a barrier(naterial layer on a substrate;

forming a photosensitive layer on the barrier material layer;
